

## COMMON COVID-19 VACCINE SIDE EFFECTS

Thank you for receiving the COVID-19 Vaccine. There is a higher chance that you will experience the common symptoms from the vaccine with your 2nd dose, including fatigue, muscle and body ache, fever, chills and headache.

You can relieve these symptoms with Acetaminophen or Ibuprofen every 4 to 6 hours and by staying hydrated with Pedialyte or Gatorade.

The symptoms should resolve within 24 to 48 hours.

If your side effects are worrying you and you would like to discuss your symptoms with our Chief Medical Officer, Dr. Moraima Trujillo (Dr. T.), please call (305) 902-5380. You will receive a call back shortly.

If you receive a COVID-19 vaccine and think you might be having a severe allergic reaction, seek immediate medical care by calling 911.
